SMART EDUCONNECT

ABSTRACT

Choosing the right course and institution is one of the most crucial decisions in a student's academic journey. Many students face challenges in accessing reliable course information, comparing institutions, and reviewing their quality. On the other hand, institutions struggle to reach the right audience for their programs and schemes.

This project proposes SmartEduConnect, a mobile/web-based application that bridges the gap between students and educational institutions. Institutions can create profiles, upload course details, fee structures, and scholarship schemes. Students, in turn, can search for courses, compare institutions, view detailed information, and share reviews based on their experiences. The system thus creates a two-way ecosystem where transparency, accessibility, and informed decision-making are encouraged.

EXISTING SYSTEM

In the current scenario, students rely heavily on fragmented sources such as:

College websites, which may not always be up-to-date.

Word-of-mouth recommendations, which are often biased.

Education consultancies, which may not provide impartial advice.

These approaches lack a centralized, user-friendly platform that brings students and institutions together, making the process time-consuming and confusing.

PROPOSED SYSTEM

The proposed SmartEduConnect system will:

Allow institutions to create accounts, manage their profiles, and list available courses, fee structures, and scholarship opportunities.

Provide students with tools to search, filter, and compare courses and institutions based on parameters like fees, location, and reputation.

Enable students to review institutions, thereby creating a transparent feedback mechanism.

Offer personalized recommendations for students based on their interests.

Ensure secure login and authentication for both students and institutions.

This will result in a centralized, efficient, and interactive platform for course and institution selection

HARDWARE AND SOFTWARE REQUIREMENTS

SOFTWARE REQUIRED

- FRONTEND: HTML, CSS, JAVASCRIPT / REACT NATIVE (FOR MOBILE APP)
- DATABASE: MYSQL / POSTGRESQL / MONGODB
- OPERATING SYSTEM: WINDOWS / LINUX
- BACKEND: NODE.JS / DJANGO / SPRING BOOT

HARDWARE REQUIRED

- PROCESSOR: INTEL I3 OR HIGHER
- RAM: MINIMUM 4 GB
- HARD DISK: MINIMUM 250 GB
- SMARTPHONE / PC: ANDROID/IOS DEVICE OR PC FOR TESTING APPLICATION

CREW MEMBERS

- Muhammed Nasih.Y
- Fasil Rahman. Mt
- Muhammed Naseef. C
- Mohammed Salih. C
